Project Work

• **Perfect House Finding & Price Prediction:**

It is web-based applications for those who are looking for a new house. This system will keep track record of housing properties available on rent or for sale. This will work as connecting bridge between customer and property seller.

Technologies: Asp.net, HTML, CSS, Bootstrap, MySQL.

• **E-Commerce Website:**

This E-commerce is a web based applications, which selling computer assessories. It is developed in PHP, so I have used session for user authentication. In backend, admin will handle all the products like adding or manipulating and also he can manage the users.

Technologies: MySql, PHP, HTML, CSS, JavaScript.

- **iDoc:**

This project is mini project build in react and I will make it full stack project on future, for now I am loading docs data statically and here I added drag and drop feature, this feature make it more cool and good looking.

Technologies: React, Tailwind
